

Empower individual choice. Deliver inclusive experiences.

Provide inclusive digital environments by dynamically enhancing content to meet every individual's unique needs, challenges, and preferences. Anthology Ally makes digital content more accessible for all, working seamlessly across any Learning Management System (LMS) and any public-facing website.

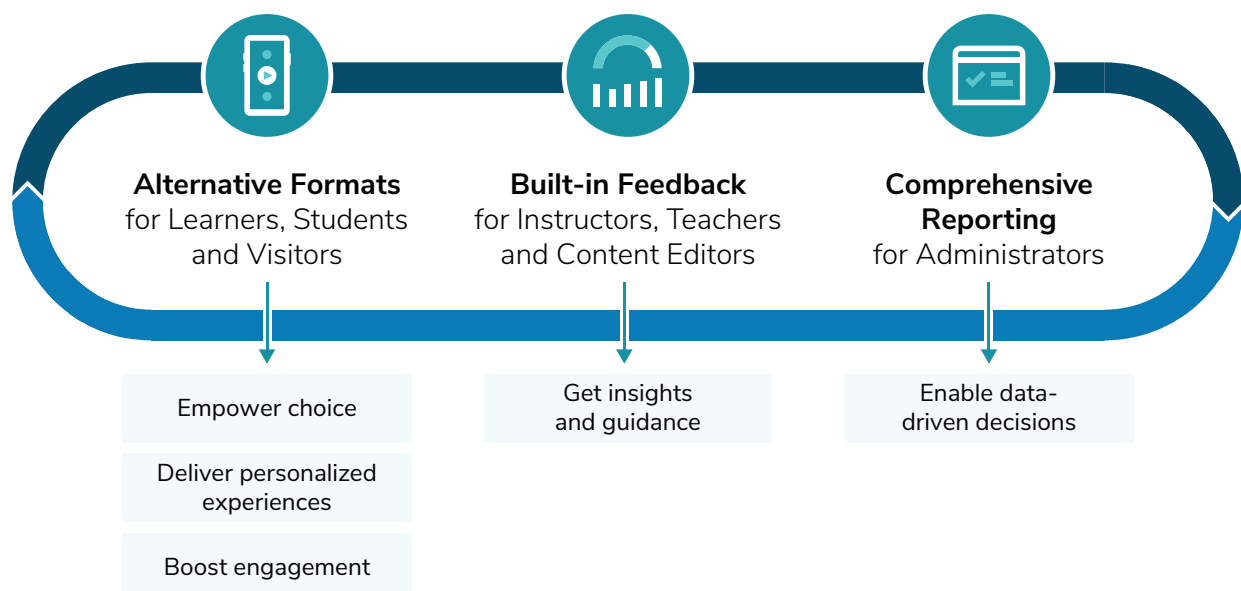

Equity is not about disability or ability; it is about accessibility for everyone.

Anthology Ally for Learning Management Systems (LMS) provides institutions with a set of holistic capabilities to make digital course content more accessible. Proactively address accessibility barriers to create more equitable opportunities and learning environments for all — and drive learner, educator, and institutional success.

Anthology Ally for websites helps organizations improve website usability by making it quick and easy for visitors to find the information they need. Our solution also enables content editors and website managers to improve accessibility for better user experiences and to fulfill legal requirements.

With powerful features, Anthology Ally helps you build more inclusive digital environments and makes content more accessible for all.

Empower individual choice

Deliver a truly personalized experience by offering individuals the flexibility of choosing the most effective way to interact with and consume digital content. Anthology Ally generates a broad range of alternative formats, automatically converted using a set of machine learning algorithms that provide a personalized, frictionless, and seamless digital experience.

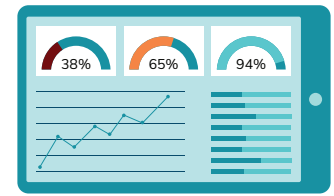

Get insights and recommendations

Create accessible and user-friendly digital content with Anthology Ally by automatically checking and scoring accessibility issues in real time. Gain detailed guidance on how to correct issues through built-in feedback. Improve the quality and usability of digital content every day, with best practices in place.

Track your progress

Proactively address accessibility barriers and keep up with rapidly changing accessibility requirements. Anthology Ally provides comprehensive reports for a clear and deep understanding of accessibility issues to enable data-driven decisions for continuous improvement and to track progress over time towards accessibility compliance.

LMS and CMS agnostic

Anthology Ally works across different LMSs, such as **Blackboard Learn** (by Anthology), **Canvas** (by Instructure), **Brightspace** (by D2L), and **Open LMS** (by Moodle), and existing workflows to automatically check for accessibility issues.

It also works with your website and scans an unlimited number of (sub) domains and pages, including embedded content, improving the readability and usability of digital materials.
